

Summer Risk Update - 08/02/24 - 14/02/24

Current Level

2

Ban on sprinklers and irrigation systems

Chance of Level 3 this summer

60%*

Our latest modelling shows this was most likely to occur in late Jan*

Chance of Level 4 this summer

23%*

Our latest modelling shows this is most likely to occur in early Feb*

Demand has held steady, and our buffer has increased. Well done, Wellington!

However, we are in the highest risk period.

With above average temperatures forecast, we need to carefully manage our water use or we may need to move to Level 3

Buffer Average past 7 days

17%

Buffer is above 10%**

We are at Level 2

Buffer Forecast next 7 days

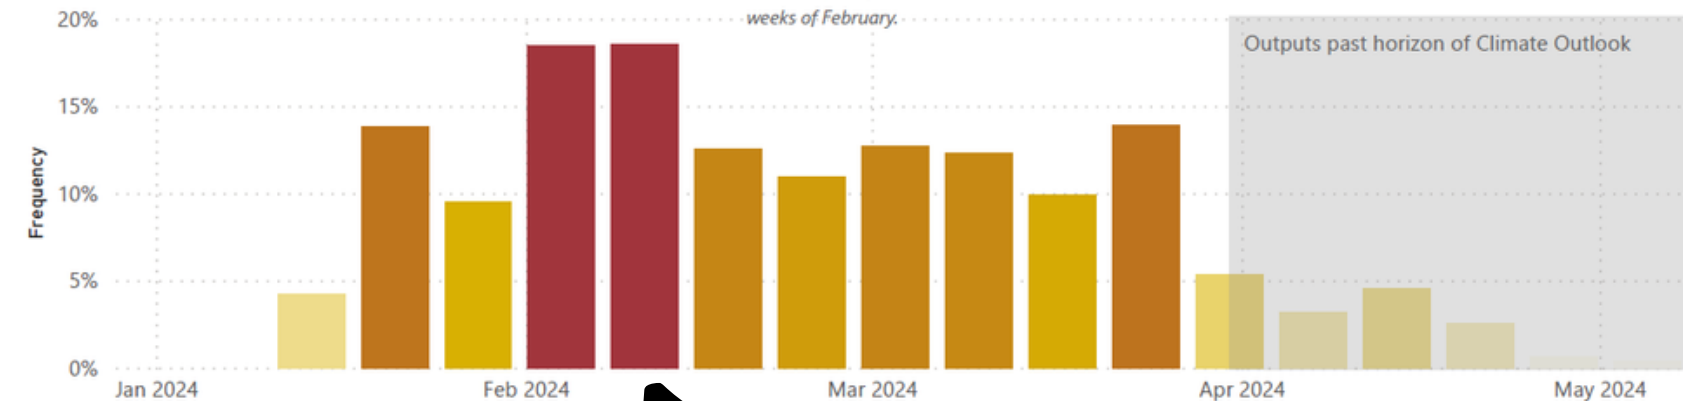

18%

Buffer is above 10%**

We can remain at Level 2

When is risk the highest?

Risk of deficit by week

We are in the highest risk period.

*This modelling is reviewed each month and updated as necessary.

*The efforts of the public following water restrictions can reduce this chance, but this requires everyone to do their bit.

**The buffer is one key indicator of risk, and is offered as a guide only. Other factors are monitored as part of level risk assessment. The buffer is reviewed weekly.
